Torque curves considering S1 duty cycle

**Stepless motor**

Stall torque 8,7Nm - 8A/phase - 120V

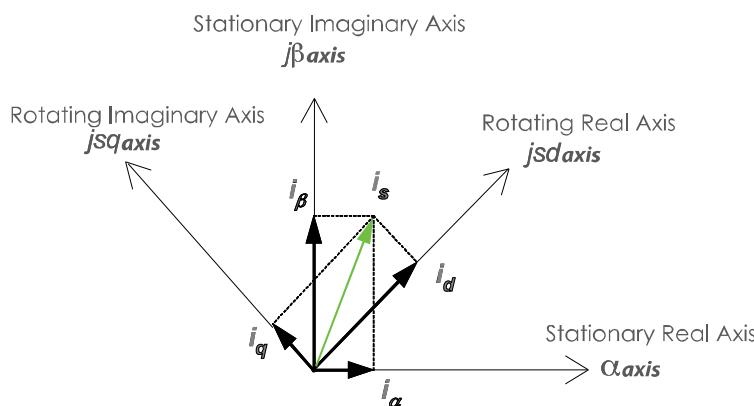

Overall dimensions: square flange 86mm, lenght 173mm

**Brushless motor**

Stall torque 3,4Nm - 2,3A/phase - 400V

Overall dimensions: square flange 91mm, lenght 177mm

- VECTOR CONTROL CURRENT MODULATION

- > Minimum speed and torque ripple
- > Low vibration
- > Low noise
- > High torque density
- > Low power consumption
- > High stiffness

- INTEGRATED STEPLESS DRIVE

## HARDWARE FEATURES

Power supply

65-130Vdc [Nominal 120Vdc]

Logic supply

20-130Vdc

Current

Maximum current internally set  
(depends on motor)

Feedback

Incremental encoder

Multiturn absolute encoder

Encoder output

Incremental encoder output (only APD version)

Digital input

N. 3 optoisolated PNP digital inputs

N. 2 differential (+24V or +5V/Line driver) digital inputs  
(used as general purpose, encoder input or step-dir input).

Analog input

1 Analogue IN +/-10V

Digital output

2 optoisolated PNP digital outputs 24Vdc max 200mA,  
(external 24Vdc required)

Digital bidirectional I/O

2 bidirectional optoisolated PNP digital IN/OUT

Interface

Profibus-DP slave

CANopen

RS232/485 (ModBus)

Available versions

Profibus-DP

CANopen (DS402),

ModBus RS485,

Step/dir, +/-10V with encoder output

## FUNCTIONAL FEATURES ISD

Integrated movement features:

device profile DS402, interpolated mode,  
positioning, extended gearing function,  
homing, capture

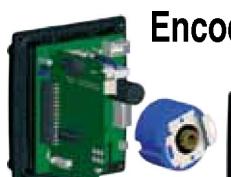

Stand alone programmability  
according to the standard IEC61131,  
ST language

Capture input

PC parametrization tool

- SD setup

SD setup is the development environment for the configuration, parameterization, tuning and programming of the drives ISD/SVM and IBD using the RS232 serial connection or a centralized connection through a fieldbus when the master controller is a controller of the FCT family. It is a software that combines various tools such as:

- Instant monitor of the main variables of the system, but also of all the secondary variables through an access to vocabulary.
- Configuration of the system (such as configuration of the digital I/O modules and the maximum limits of speed/acceleration).
- Updating of parameters and firmware.
- Auto-tuning and dedicated tuning of the current loops, speed and position, with help of procedures for self-esteem of the moment of inertia.
- Oscilloscope for the analysis of the variables.
- Tools for testing of basic movements (Function Generator).

Finally, recalling that the systems are also programmable, SD setup is also proposed as a tool that allows editing and debugging programs written in IEC61131 type Structured Test.

SD setup è l'ambiente di sviluppo per la configurazione, parametrizzazione, programmazione e taratura degli azionamenti ISD/SVM e IBD utilizzando la seriale RS232 o un collegamento centralizzato tramite bus di campo quando il master controller è un controllore della famiglia FCT. Si tratta di un software che unisce diversi strumenti come:

- Monitor immediato delle principali variabili di sistema ma anche di tutte le variabili secondarie tramite un accesso a vocabolario.
- Configurazione del sistema (ad esempio degli I/O digitali, dei limiti massimi di velocità/accelerazione).
- Aggiornamento di parametri e firmware.
- Autotuning e taratura dedicata dei loop di corrente, velocità e posizione, con ausilio di procedure di autostima del momento di inerzia.
- Oscilloscopio per l'analisi delle varie grandezze.
- Strumenti per il test dei movimenti base (Function Generator).

Infine, ricordando che i sistemi sono anche programmabili, SD setup si propone anche come lo strumento che permette l'editing e il debug dei programmi scritti in linguaggio IEC61131 di tipo Structured Test.
